Our Clients

For most small to mid sized companies, the resources necessary to effectively research, screen, assess and successfully hire the "right" candidate are typically limited. Those limited "resources" usually include time, money and people necessary to perform the many functions that contribute to a successful new hire. And time is not only a component within the search process, it's normally the prime determinate in measuring the success of the search. At BlueSky Personnel Solutions, we provide companies with effective, affordable, flexible and timely recruitment solutions to help you to achieve your business goals, with qualified and motivated people.

Our Approach

BlueSky Personnel Solutions employs proprietary, candidate tracking systems linked to both internal and external databases, with the capability to search, track and manage literally tens of thousands of candidates, while providing 24/7 web based access for both our consultants, clients and targeted candidates. At BlueSky, we also make extensive use of internet related tools, including business networks and groups, to conduct searches and recruitment campaigns amongst the vast "under the radar" market of "passive" job seekers. By intercepting this market of "passive" job seekers, we are able to network and solicit the interest of highly qualified candidates who might otherwise, never be encouraged to explore available job opportunities. Following initial screening of prospective candidates, we employ an array of assessment and testing tools as a means to determine a recommended "fit" with the needs of the client.

Our Specialized Capabilities

At BlueSky Personnel Solutions, we specialize in recruitment of temporary, permanent and contract employees typically employed in fulfilling the requirements and responsibilities of administrative and managerial workplace environments, including mid-level and executive management.
